Wireless Card Manager appender KeyMacro using ETSI WLAN standard. KeyMacro will provide keys for WLAN access for you. Perform WLAN configuration operations on the WLAN manager. Add a new WLAN profile to the WLAN manager. The program was designed to support the WLAN standard which was developed by the European Telecommunications Standards Institute (ETSI) and approved by the Institute of Electrical and Electronics Engineers (IEEE). What is the difference between two WLAN standards? This program can only work with WLAN that support IEEE802.11i standard. KeyMacro does not support all the 802.11i features. IEEE 802.11i 802.11i is a standard for wireless local area networks (WLANs) that was designed to improve upon the performance of IEEE 802.11 standards. The work on 802.11i started as a 1999 (work item) in early 1999 by Cisco, Check Point, Ericsson, Hitachi, Philips, Sandvine, SKYRIX, and Toshiba. The 802.11i WLAN standard aims to improve wireless local area networking (WLAN) by: Optimizing the medium access control (MAC) and physical layer (PHY) for data rates of 1 Gbit/s and above. Compressing data as it is transmitted. Link adaptation. The IEEE 802.11i standard is the result of IEEE 802.11 draft specifications. The IEEE 802.11i standard is backward compatible with IEEE 802.11 draft specifications. The IEEE 802.11i standard, currently in the final stage of standardization, has been designed to be implemented in a wireless local area network (WLAN). The standard has been developed to be compatible with IEEE 802.11-1999 standard. The IEEE 802.11i standard consists of the following parts: Part 1: Orthogonal Frequency Division Multiplexing (OFDM) Part 1. Part 2: Orthogonal Frequency Division Multiplexing (OFDM) Part 2. Part 3: Enhanced Physical Layer (EPL) Part 3. Part 4: Wireless Access in Licensed Bands (WALB) Part 4. Part 5: Wireless Access in Licensed Bands (WALB) Part 5. Part 6: Wireless Access in Licensed Bands (WALB) Part 6. Part 7: Wireless Access in Licensed Bands (WALB) Part 7.
